

Wine Filters - Service & Repair

Sustainable, smart and cost-effective solutions

Brush up your Wine Filters

After years of best service and many thousand liters of filtered wine, even the strongest hollow-fiber modules need a pit stop.

Reduced capacity, defective fibers, irreversible dirt and contaminations ask for immediate action to maintain the good quality of your wines and keep your production cost-effective.

What if, instead of purchasing new wine filter modules, your current ones could be reworked to look and perform as good as new?

CUT Membrane Technology is your experienced expert for revitalizing old und spent hollow-fiber based wine filters - no matter if housed in a plastic cage or stainless steel vessel.

OLD to NEW in four simple steps

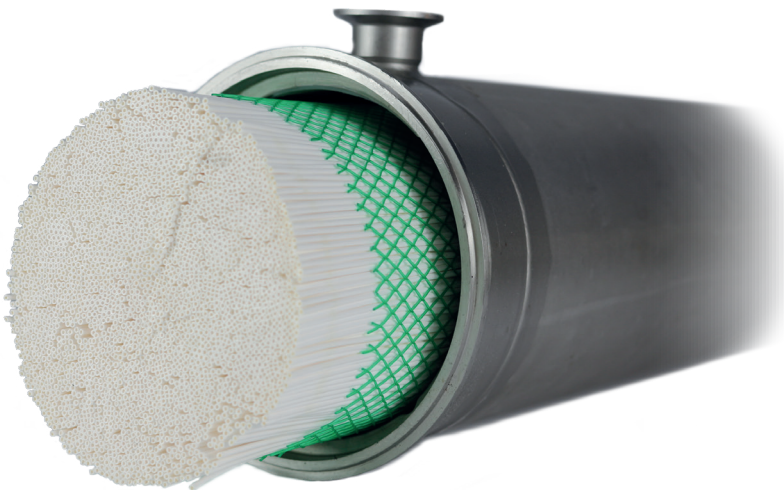

1 Provide us with your old wine filters

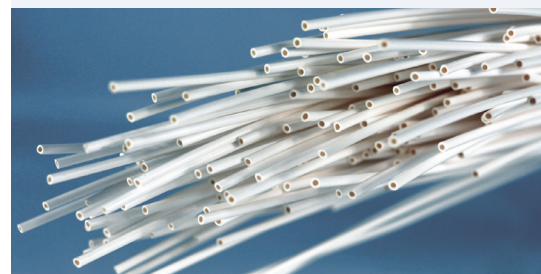

2 Core removal and cleaning

3 Customizing & refilling

4 Potting, polishing & testing

New Fibers – New Life

For all service and repair jobs we always use best-in-class hollow fibers to ensure maximum filter performance. Proven & reliable.

About the Company

CUT Membrane Technology is an independent manufacturer of innovative cross-flow membrane filters, headquartered in Erkrath, Germany.

In almost two decades of activity and in countless projects the CUT team has proven its strong customer orientation, technical skills and consulting competences when it comes to sustainable filter solutions for food & beverage, wastewater treatment and industrial processes.
